Sommaire

Introduction

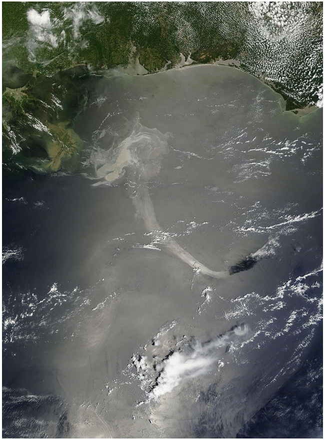

Figure 1: Explosion de *Deepwater Horizon, 20/04/2010*

Equation de transport

$$\boxed{\partial_t c + u \cdot \nabla c = 0}$$

c(x,t) : concentration en polluant à la position $x \in (0,1)^2 = \Omega$ à l'instant $t \in [0, T]$

u : champ de vitesse, dépend *a priori* de x et de t

Champs de vitesse étudiés

Champ de vitesse uniforme

$$\begin{cases} u_x = ||u|| \cos(\theta) \\ u_y = ||u|| \sin(\theta) \end{cases}$$

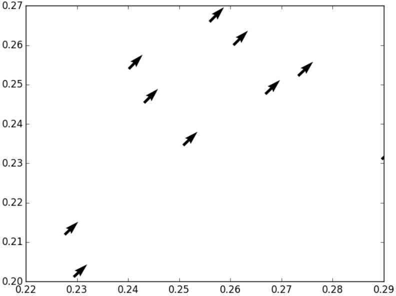

FIGURE 2: Écoulement constant avec un angle θ

Champs de vitesse étudiés

Écoulements cellulaires

$$\psi(x, y) = \sin(2\pi x)\sin(2\pi y) + \theta_0 \cos(2\pi\theta_1 x)\cos(2\pi\theta_2 y)$$
$$\theta_0 \in [0, 2.5] \text{ et } (\theta_1, \theta_2) \in [0.5, 4]^2$$

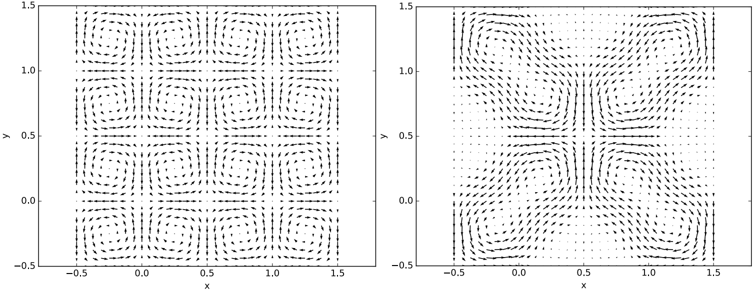

FIGURE 3: Champs de vitesse pour deux jeux de paramètres

Champs de vitesse étudiés
Champ de vitesse de Lamb-Oseen

$$\mathbf{V}(r,\theta,t) = \frac{\Gamma}{2\pi r}\left(1 - \exp\left(\frac{-r^2}{4\nu t + r_c^2}\right)\right)\mathbf{u}_\theta$$

Approche eulerienne
Méthode des volumes finis

Approche eulerienne

Modèle réduit

Approche lagrangienne

$X(\xi, t) \in \mathbb{R}^{n\times 2}$ désigne les positions, à l'instant $t \in [0, T]$, des particules qui étaient initialement aux positions $\xi \in \mathbb{R}^{n\times 2}$

$$\begin{cases} \partial_t X = v(X(\xi, t), t) \\ X(\xi, 0) = \xi \end{cases}$$

Hypothèses

$v \in \mathcal{C}^0(\mathbb{R}^{n\times 2} \times \mathbb{R}) \bigcap W^{1,\infty}(\mathbb{R}^{n\times 2} \times \mathbb{R})$

Théorème de Cauchy-Lipschitz

Existence et unicité d'une solution locale pour des temps arbitraires

Conséquence

Le transport est à vitesse finie

Approche lagrangienne
Résolution numérique

Schéma de Crank-Nicholson :

$$X^{(k+1)} = X^{(k)} + \frac{\Delta t}{2}(v(X^{(k)}, t^k) + v(X^{(k+1)}, t^{k+1}))$$

Algorithme du point fixe :

$$\left\{ \begin{array}{c} X_0^{(k+1)} = X^{(k)} \\ X_1^{(k+1)} = X^{(k)} + \Delta t v(X^{(k)}, t^k) \\ X_{r+1}^{(k+1)} = X^{(k)} + \frac{\Delta t}{2}(v(X^{(k)}, t^k) + v(X_r^{(k+1)}, t^{k+1})) \end{array} \right.$$

Approche eulerienne

Champ de vitesse uniforme

16 simulations, $\theta \in [0, \frac{\pi}{2}]$
